

Samsung Ultrasound System for Veterinary Care

A Comprehensive Selection for Veterinary Care

Samsung ultrasound systems for veterinary adopt Samsung's pioneering imaging engine, Crystal Architecture™, boast various advanced features, easy-to-use operations, and dedicated design that improve the routine diagnostic experience.

Sophisticated 2D Image Processing

Provide uniform imaging performance of overall image area

S-Harmonic™ mitigates the signal noise, enhances contrast, and provides uniform image performance of overall image area from near-to-far.

Reduce noise to improve 2D image quality

The noise reduction filter enhances the edge contrast and creates sharp 2D images for optimal diagnostic performance. In addition, ClearVision provides application-specific optimization and advanced temporal resolution in live scan mode.

Enhance hidden structures in shadowed regions

ShadowHDR™ selectively applies high-frequency and low-frequency of the ultrasound to identify shadow areas where attenuation occurs.

Clean up blurry areas in the image

HQ-Vision™ provides clearer images by mitigating the characteristics of ultrasound images that are slightly blurred than the actual vision.

Detailed Expression of Blood Flow Dynamics

Examine peripheral vessels with directional Power Doppler

S-Flow™, a directional Power Doppler imaging technology, can help to detect even the peripheral blood vessels. It enables accurate diagnosis when the blood flow examination is especially difficult.

Visualize slow flow in microvascular structures

MV-Flow™ offers an advanced color imaging for visualizing slow flow of microvascularized structures. High frame rates and advanced filtering enable MV-Flow™ to provide a detailed view of blood flow in relation to surrounding tissue or pathology with enhanced spatial resolution.

Show blood flow in vessels in a 3D like display

LumiFlow™ is a function that visualizes blood flow in three dimensional-like to help understand the structure of blood flow and small vessels intuitively.

Enriched Diagnostic Features

Display and quantify tissue stiffness in a non-invasive method

S-Shearwave Imaging™ allows for non-invasive assessment of stiff tissues in various applications. The color-coded elastogram, quantitative measurements, display options, and user-selectable ROI functions are useful for accurate diagnosis of various regions.

Improved Workflow Efficiency and Ergonomic Design

We believe that a truly great system offers customer-centric working conditions. The streamlined workflow supports your daily procedures by reducing keystrokes and by combining multiple actions into one. Users have the option of customizing their diagnostic settings based on personalized protocol, resulting in a more simplified exam process and faster workflow.

Optimize image with one touch of the button

QuickScan™ technology provides intuitive optimization of both grayscale and Doppler parameters.

Build predefined protocols for streamlined process

EzExam+™ assigns protocols for examinations that are regularly performed in the hospital in order to reduce the number of steps that you have to go through.

Compare previous and current exam in a side-by-side display

EzCompare™ automatically matches the image settings, annotations, and bodymarkers from the prior study.

Select transducer and preset combinations in one click

QuickPreset allows the user to select the most common transducer and preset combinations in one click.

Customize frequently used functions on the touchscreen

A customizable touchscreen allows the user to move frequently used functions to the first page.

Tilt touchscreen to accommodate user preference

Samsung's tilting touch screen can be adjusted to accommodate user's viewing preferences in any scanning environment.

Use the system when AC power is temporarily unavailable

BatteryAssist™ provides battery power to the system, enabling users to perform scans when AC power is temporarily unavailable.

Save image data directly to USB memory

QuickSave function allows image data to be saved directly on USB memory during the exam.

Real-time image sharing, discussion, and remote control of ultrasound system *

SonoSync™ is a real-time ultrasound image sharing solution that allows voice communication and remote controllability for effective collaboration between physicians and sonographers at different locations.

* The availability may vary by product and country.

RS85 Prestige

The Real Revolution

RS85 Prestige has been revolutionized with novel diagnostic features across each application based on the preeminent imaging performance. The advanced intellectual technologies are to help you confirm with confidence for challenging cases, while the easy-to-use system supports your effort involved in the routine scanning.

Sophisticated 2D Image Processing

ShadowHDR™, HQ-Vision™, PureVision™, S-Harmonic™, ClearVision, MultiVision

About Samsung Medison CO., LTD.

Samsung Medison, an affiliate of Samsung Electronics, is a global medical company founded in 1985. With a mission to bring health and well-being to people's lives, the company manufactures diagnostic ultrasound systems around the world across various medical fields. Samsung Medison has commercialized the Live 3D technology in 2001 and since being part of Samsung Electronics in 2011, it is integrating IT, image processing, semiconductor and communication technologies into ultrasound devices for efficient and confident diagnosis.
